## PROJECTS

### Business Builder: E-commerce site

Live App: <https://danielle-m-estrella.herokuapp.com/>

GitHub: <https://github.com/gcvarela21/business.builder>

- Made for San Francisco-based baker Danielle M. Estrella
- Full stack application built with React, Express, Node.js, and Bootstrap for it's frontend CSS Framework
- Incorporates Stripe API for secure checkout
- Utilizes local storage for cart persistence
- Functional and appealing front-end design.
- <https://github.com/gcvarela21/business.builder>

### Post-Pandemic Bucketlist

Live App: <https://cryptic-falls-03491.herokuapp.com/>

GitHub: <https://github.com/pamela-gutierrez/post-pan-bucketlist>

- Full stack application featuring Express and Handlebars
- Users can create customized bucket lists and then choose to checkoff or re-do activities
- Deployed to Heroku and connected to JawsDB

## Google Book Search

Live App: <https://google-book-search024.herokuapp.com/>

GitHub: <https://github.com/pamela-gutierrez/google-book-search>

- Full stack application built with React, Express, Node.js, and Bootstrap
  - Uses the Google Books API to allow users to search for books, links to the book's Google Page, and save their favorites
  - Favorites are saved using MongoDB and Mongoose
-
